There are various such clone scripts that could be perfect for your business like FoodPanda clone, just eat clone. Oddappz offers you the best readymade online food ordering system which is developed as FoodPanda clone (Similar to FoodPanda website and application). We will provide the customized app according to requirement of your business and local market. FoodPanda clone facilitate customers to browse restaurants and menus based on location, can compare prices, can rate and review products and services, can pay online or off-line with multiple payment options, can share the menu on social media and much more awesome features.

How our online food ordering system works?

Customers search restaurants on the basic of their location

Advanced search engine embedded in the application helps customer to browse nearby restaurants and can select their favorite dishes and menus.

Customer placing order from web/mobile

After selecting preferred restaurant, customers can place order for their favorite dishes, through their web and smartphones by our online food ordering system.

Restaurant receives order through application

The Admin forwards the received order to the concerned restaurant that customer have chosen.

Customer gets confirmation

A message through push notification is sent to customer to acknowledge the confirmation with expected delivery time.

Restaurant assigns orders to delivery boys

As the food is ready to be served, restaurant dispatches order to delivery staffs.

Delivery staffs delivers food

As the order is dispatched, delivery staff updates it to the restaurant as well as customers. Then he delivers order to the address given by restaurant. Delivery boy collects payment in case of cash on delivery option. Otherwise customer can pay online while placing order.
