Our Services

Smart Data is an organization of talented individuals with diverse experience across a wide range of industries. As a software development company we leverage that exceptional expertise to identify opportunities so we can help solve the complex business problems of our customers.

Digital Transformation

We use the latest technologies to create new or modify existing business processes

Application Development

Is your out-of-the-box solution not keeping up with your business needs? A custom application might be the answer.

Staffing Solutions

Using the same criteria, personnel, and process that we use to grow our staff internally, we offer sourcing and vetting expertise to clients who need resources

Dev-Ops/Agile Consulting

We help organizations make the transition from traditional development and release practices to a modern set of tools and Agile processes

Automation

Robotic Process Automation (RPA), the Internet of Things (IoT) and Machine Learning (AI) are rapidly becoming key technologies in the pursuit of automation. Smart Data's experience in these technologies can help you achieve unique competitive advantages.

Cloud Development

Learn how we deliver reliable, secure and scalable solutions for our customers.

Our Process

The Smart Data process is focused on our customers — their problems, their needs, their wants, their regulatory requirements, their tech stack, their workflows, their users.

Accelerating COVID-19 Testing Results using AI

by Katie Indoe | Feb 1, 2021

At Smart Data, we enjoy understanding, designing and building software products. We accomplish that by listening to our customers, understanding how they work and by being transparent so they see how we work. That collaboration allows us to do more than build a better product. We solve complex business issues resulting in positive business

impacts.
