Vulnerability Assessment & Penetration Testing (VAPT):

We Offers **SAST** (Static Application Security Testings) & **DAST** (Dynamic Application Security Testing) of Any type of Assets you have like, Web Apps, APIs, Endpoints, Database servers, Application Servers, Mobile Devices , IoT Devices, Vehicles and Smart Automation Devices..

We uses Automatic as well as Manual Pentesting Approach to cover known and unknown vulnerabilities. And our specialised and unique **AI + HI** methodologies will Detect threats, removes if exist and enforce for further protection.

Network Security Testing (NS|S):

We have specialization in Network Security Field. And having Extraordinary hands on experience handling in Firewalls {Hardware and/or Software}, UTMs {Unified Threat Modules}, Routers, Switches, Servers, Personal Cloud Storage, Hubs, Repeaters.

Redesign of Network Topology, Network Security Pentesting, Network Security Enforcement, Network Fault Tolerance And Network Auditing.

2.

Disaster Recovery Planning (DR|P):

In this service we offers disaster recovery and emergency incident planning as well as breach incident response planning. Business should be ready to face eXtreme situation. This will be most important because no one know what happens next?

Our eXpert team will study your business and then prepares plan according to business type and structure. Then we will implement these points and make sure your business is ready to face Challenges. Challenge may be any form like Breach, Cyber threats, Natural Disaster, etc.

3.

Malware Removal (MR | R):

Every business faces loss or faced in past due to Malware. In this type, We offers specialised and Sandboxed Malware Removal Services. In this, we prepares affected assets and safely move to those assets to the **Sandboxed environment,** which is isolated storage from main business premises storages. And then we perform removal of malware.

Ransomware, **W**ebsite or **C**omputer **M**alware, **V**irus, **T**rojans, **A**dwares, **K**eyloggers and all other terrible threats. We can handle with ease due to our methodologies.

4.

Source Code Review (SC|R)

We Offers secure code review. Trust us and We will check the Application source code for errors, vulnerabilities in code, bugs. Just Like Software Testing, but in Advanced! Functional, Feature and Security of Application Code. We will suggest a proper and developer friendly Code improvement like To use OOS or not! And we also turns old vulnerable code to fully functional secure code.
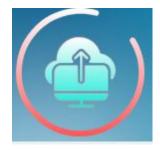

Because if your app's code is buggy and vulnerable, then it directly affects your customers and market reputation. We will make sure we can put max efforts to help build a secure apps. **{W**eb, **M**obile, **E**ndpoints **A**pps**}**

5.

IT Compliance & Auditing (ITA | C)

Often businesses are required to be comply with Data Protection and Legal Regulations. Business should be comply with Rules, Regulations and Standards defined By Authorities and Government. This process is called as Compliance. Our Expert Lead Implementers and Lead Auditors, Lawyers and Auditing Specialist can make this process Easy and Straightforward. We Offers following Compliance & Auditing Options:

Mobile Forensics {Android, iOS, Windows}

Memory Forensics

Digital Forensics

Disk Forensics

Malware Analysis

Behavioural Analysis

Valid Digital Evidence Gathering from different Devices

8.

Data Recovery (DR | S)

We offers Data Recovery Services. Which includes Software based Recovery. Which means if you lost data due to natural, system failure or some other reason, Our Technicians and Hackers works to get your data back. The Chance of Data Recovery is **80%**. Depends upon Data Duration and Cluster Type!

We already recovered **10TB+** data from different customers devices. Supported devices are Servers, **R**AID **S**torage **D**evices, **Fl**ash **D**rives, **B**lue**R**ay **D**VDs, **C**omputers, **L**aptops, **H**DDs, **S**SDs, **E**nterprise **S**torage **D**evices.

9.

RED Teaming Assessment (RT | SA)

Red Teaming Assessment for improving security posture of your organization. This is ideal for organizations who want to implement advanced threat incident response policy. This includes simulated/sandboxed attacks against the organization's security. The organization who has performed Red Teaming earlier should have better protections against known/unknown threats rather than traditional pentesting approach.

Red Teaming is not ideal for smaller organizations, it is only for medium to large organization.
